Art Unit: 1772

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

2. (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1 and 11-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Luhmann (6,136,397).

Luhmann relates to a redetachable self-adhesive device comprising a plate whose reverse surface is bonded with a double-sidedly adhering adhesive sheet having an outwardly projecting grip tab. The reverse surface has low stick and slip friction region along the end edges. The edge region's low friction can be achieved by, among others, incorporating rotatable roller (col. 6, lines 14-16). Presence of such roller or similar elements would require that the edge region be spaced a distance from the adhesive sheet and, as such, said spacing would be dependent on the thickness of the elements.

Further, figure - 4 shows the presence of spacers whose height is less than the adhesive sheet thickness. The edge region can be a low-energy polymer surface. The adhesive is covered

with a release liner. The plate can have fixing means such as a hook. A method of redetaching involves pulling the sheet in the direction of the bond plane.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-4 and 6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Luhmann.

Luhmann, as discussed above, fails to teach that the spaced distance is 0.1 to 1.5 mm. It would have been an obvious matter of design choice to one of ordinary skill in the art to provide a spacing distance, in the edge region, as claimed based on optimization through routine experimentation for using the optimum size roller.

Similarly, the surface slip friction can be obtained by providing roughness based on optimization through routine experimentation.

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claims 1-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 2, 5-7, 9-10 and 13; the phrase "in particular" is deemed to be indefinite. It is unclear as to which limitation is being claimed.

Art Unit: 1772

Claim 17, the phrase "or the like" is found to be indefinite. It is not clear as to what is encompassed by said phrase.

8. Claim 5 is free of the prior art uncovered so far in that the spaced distance (V) rises continuously in the formation of an angle of 5-120 degrees is not taught in the uncovered art.
